MF batteries (also called VRLA or Valve Regulated Lead Acid) are sealed batteries which use gas recombination technology. This technology allows for less maintenance, and does not require water refilling.

MF batteries are supplied with an acid pack, and must be activated by filling the acid before first use.

The main advantages of MF Batteries are :

- Reduction of plate sulfation
- Higher life cycle (up to three times longer than conventional batteries)
- Less Maintenance (no water refilling needs)
- Longer Voltage hold

These batteries are perfectly suitable for motorcycles, scooters, ATVs (All Terrain Vehicles), UTVs (Utility Vehicles), watercraft, snowmobiles and lawnmowers.

TECHNOLOGY

- AGM construction (absorbed acid)
- VRLA battery (Valve Regulated Lead Acid)
- Dry charged with acid pack included

FEATURES

- Upright installation only
- Maintenance free (No water refilling)
- Sealed, no gas emission through venting hole (under normal operation)
- Non spillable
- High power
- Does not need to be recharged while stocked
- Suitable for cold weather

Conventional batteries are lead acid flooded batteries. These batteries can be delivered dry charged with or without an acid pack, and need to be filled before first use.

Conventional High Performance batteries include a sulfation retardant technology which reduces battery-killing plate sulfation. This results in a longer battery life, especially in standby or storage mode.

These batteries are perfectly suitable for motorcycles, scooters, ATVs (All Terrain Vehicles), UTVs (Utility Vehicles), watercraft, snowmobiles and lawnmowers.

TECHNOLOGY

- Lead acid dry charged construction (absorbed acid)
- No acid in cells, must be filled with acid before use
- 6 & 12V batteries

FEATURES

- Upright installation only
 - Has to be checked periodically and refilled with water if necessary
 - Internal gas emission through venting hole
 - Handle with care to prevent acid spillage
 - Regular life duration
- Does not need to be recharged while stocked
